The poster sessions will be held in the Courtyard Marriott at 125 Calhoun Street. You will be provided a 6’- 8’ table for your poster, handouts and other supplemental materials, as well as two chairs. You are expected to bring your own display boards **appropriate for tabletop display**. Please remember to bring pins or thumbtacks for mounting your display if necessary. You may purchase tri-fold display boards locally at **Artist & Craftsman Supply**, located at 143 Calhoun Street, (843) 579-0077. The cost is $6 per board. While electrical outlets are available we advise that anyone who plans to use a laptop to supplement their poster insure that the battery is properly charged. **Tip:** You may wish to provide a sign-up sheet to record the names and addresses of attendees who might want more information, reprints, etc.

The mounting of the display should be accomplished during the 15 minutes preceding your scheduled presentation and taken down during the 15 minutes following your assigned time.

**Things to keep in mind when you are creating your poster:**

**Audience:**
Who will see your poster? Design and organize your content to fit your intended audience. **Remember, professional publishers, vendors as well as librarians will be viewing your poster.**

**Content:**
Think about what your research/project is really about. Be brief but include necessary details. **Focus on what you have learned and what knowledge would you like to impart to your audience in the brief time that you have their attention.** What discoveries have you found? Where they fascinating, surprising, disturbing? Did your findings confirm your hypotheses and assumptions, or run contrary to your expectations?

**Design:**
Paying attention to visual design is essential for an effective poster. **White space and images are as important as the text and the placement and adjustments of the three should be eye catching.** However, flashiness is not the main objective. The design goal is to help your audience understand your research. Remember that using high-quality graphics, including photographs, illustrations, charts, graphs, maps, etc. will make it easier for your viewers to digest by. Arrange the information in bullet points when appropriate. Put lists of statistics in tables. Highlight, bold, and/or italicize responsibly. Use color if you can.

**Other design tips:**
**Keep titles brief.** Overly long titles are more difficult to remember.
**Make your fonts big** enough to read from a reasonable distance, say around four feet.
**Put your name(s) and contact information** on the poster preferably near the title.
